

Adress book

I'm really absent-minded person, who have got a lot of acquaintances, which I have to keep info about.

Functional requirements:

- I want to be able to add/edit/delete contacts
- I want to be able to search by name/surname match through my contacts
- I want to be able to group my contacts
- I want to be able to search by group through my contacts
- I want to be able to put any contact in any group (contact can be in only one group)

Technical requirements

- It should be WEB application
 - For the client side must be used: HTML, CSS (any libs as Twitter Bootstrap, Blueprint ...), JavaScript (any libs as jQuery, Prototype ...)
 - Server side is not required

Additional requirements(*optional*)

- For server side any language as Ruby, PHP, Python, JavaScript, C#, Java ...
- It should work like one page WEB application and should use AJAX technology, load and submit data without reloading a page.
- It should have client side and server side validation.
- It should have user authentication solution and a user should only have access to their own contacts.
- It should have automated tests for all functionality.
